Â Student, when disregulated, are climbing the fire escape and access the roof. Â Adam suggested that we partially enclose the bottom portion of the fire escape so the do not have the ability to climb the stairs or scale the railing. Â Our plan is to install matching siding on all sides from 8' - 10" in height. Â There will not be a roof. Â A metal door will be instaled at the bottom of the fire escape stairs that will have a crash bar on the inside with the door opening out. Â This work can be completed by our maintenance person.	2000
