

Site Conditions and Open Space Preservation

The Village of Clark Brook design team has conducted a comprehensive assessment of the site's conditions and resources. All wetlands were mapped and became an integral part of the planning process of the Village. Village planning was done to minimize wetland impacts and maintain wetland buffers.

Village development will take place on approximately 65 acres of the site.

Within the 128 acre Village, approximately 25 acres are wetlands. These areas will be preserved, as will approximately 35 acres of uplands.
