Question and Answer

The current Salmon Falls Road Reconstruction project includes reference to a segment of road being designated by NHDOT as eligible for HSIP funding assistance. Could you identify the limits of the HSIP designation and any known safety issues that led it to be selected for HSIP designation? I checked with NHDOT and they weren't sure and suggested contacting the City Engineer.

We conducted a road safety audit with NHDOT (Stuart Thompson, NHDOT) on the section of road that was designated for such program as a result of the fact there has been more than one fatality in this section of road during the past 5 years +/- . The section of road is between Whitehall Road and Tara Estates. It was recommended that improvements to the clear zone be made (remove trees) and additional signage (chevrons, larger signs, etc.). We will be putting up better signage this year. Other suggestions welcomed.
